Summary

Full-stack engineer with nearly 5 years of building production backend services and cross-platform frontends. Currently shipping Kotlin/Spring Boot microservices (gRPC, Kafka, PostgreSQL) and React Native screens for a US digital bank. Comfortable owning features from schema to pixels.

Skills

Languages: JavaScript, TypeScript, Kotlin, Python, SQL

Backend: Spring Boot, Spring Security, GraphQL, gRPC, REST, Node.js, Microservices

Frontend: React, React Native, Next.js, Jetpack Compose, Zustand, Apollo Client

Data & Infra: PostgreSQL, MySQL, MongoDB, Redis, Kafka, Docker, GCP, Firebase, Vercel

Testing: Cucumber (BDD), Gherkin, JUnit

Experience

Accenture (Payroll: eSoftLabs)

Aug 2025 – Present

Full Stack Developer (Banking Sector – Varo Project)

- Own the cashback service end to end at a **6.5M**-customer US digital bank — built the vendor-API integration, Kafka event flow, and React Native carousel.
- Implemented **gRPC** for inter-service communication, using an internal **Spring Security** plugin to extract customer context from RPC metadata, and **SQL** databases for financial data persistence.
- Backfilled zip codes for **7.5M** users via a cron pipeline processing **7,500 users per 10-minute run** — bounded Kotlin-coroutine concurrency capped vendor load, and a circuit breaker fast-failed on outages. Completed in **7 days, zero production incidents**.
- Architected an automated **BDD testing framework** using Kotlin, Cucumber, and Koin dependency injection to validate high-level scenarios, wiring Apollo **GraphQL** and gRPC integration clients to test downstream microservices.

TATA Consultancy Services (TCS)

Dec 2021 – Aug 2025

Android Developer (Jaguar Land Rover client)

- Built scalable UI components with Kotlin, Jetpack Compose, StateFlow, and ViewModels for Android Automotive ADAS features (Lane Keep Assist, Adaptive Cruise Control) using MVVM.
- Performed functional testing on Android Automotive ADAS modules using Gherkin.

Projects

Split Money – Full-Stack Expense Manager | [Web Demo](#) · [Android App](#) · [Source Code](#) Mar 2026 – Present

- Architected a **cross-platform application** (Web, Android) using **React Native**, migrating from a native Android MVP to a **full-stack architecture**.
- Developed a scalable backend API with **Kotlin**, **Spring Boot**, and **Spring for GraphQL**, securing the application with **custom JWT authentication** via **Spring Security**.
- Integrated **PostgreSQL** (Neon DB) and managed frontend state using **Zustand** and **Apollo Client**; engineered a **greedy settlement algorithm** to calculate net balances and minimize transactions, deploying via **Vercel** and **Render**.

Expense Mate – Full-Stack Expense Tracker | [Demo](#) · [Source Code](#)

Nov 2024 – Apr 2025

- Developed the app using **Next.js**, **TypeScript**, **MongoDB**, and **NextAuth**; added visualizations with **Recharts**.
- Implemented **Redis caching** to reduce MongoDB read operations, **optimize API** response time **~40–50%**.

Achievements

- Innovation Super Star, TCS (Awarded for automation tools boosting productivity) – [Certificate](#) Dec 2024

Education

Rajarajeswari College Of Engineering

Bengaluru Karnataka

Bachelor Of Engineering

Jul 2017 – Aug 2021

- Graduated with **78.4%** in **Electronics & Communication Engineering**.
