Summary

Full-stack engineer with nearly 5 years of building production backend services and cross-platform frontends. Currently shipping Kotlin/Spring Boot microservices (gRPC, Kafka, PostgreSQL, AWS) and React Native screens for a US digital bank. Comfortable owning features from schema to pixels.

Skills

Languages: Kotlin, Java, TypeScript, JavaScript, Python, SQL

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, GraphQL (Spring for GraphQL, Apollo), gRPC, REST, Node.js, Microservices

Frontend: React, React Native, Next.js, Jetpack Compose, Zustand, Apollo Client

Data & Infra: PostgreSQL, MongoDB, Redis, Kafka, Docker, AWS (SQS, S3, Athena, CloudWatch)

Testing & Build: JUnit, Mockito, Cucumber (BDD), Gherkin, Gradle, GitLab CI

Experience

Accenture (Payroll: eSoftLabs)

Aug 2025 – Present

Senior Software Engineer — Full-Stack Developer (Banking Sector – Varo Project)

- Own the cashback service end to end at a **6.5M**-customer US digital bank — built the vendor-API integration, an **AWS SQS** consumer that confirms a customer earned an offer before payout is released, the **Kafka** event flow, and the React Native carousel.
- Implemented **gRPC** for inter-service communication, using an internal **Spring Security** plugin to extract customer context from RPC metadata, and **PostgreSQL** for financial data persistence.
- Backfilled zip codes for **7.5M** users via a cron pipeline processing **7,500 users per 10-minute run** — bounded Kotlin-coroutine concurrency capped vendor load, and a circuit breaker fast-failed on outages. Completed in **7 days, zero production incidents**.
- Built a config-driven **ETL** pipeline on **AWS** — scheduled multi-table extracts land as date-partitioned objects in **S3** for third-party vendors, with **CloudWatch** monitors on job health and **Athena** for ad-hoc queries.
- Architected an automated **BDD testing framework** using Kotlin, Cucumber, and Koin dependency injection, wiring Apollo **GraphQL** and gRPC integration clients to test downstream microservices **against live environments**; unit coverage in **JUnit** with **Mockito**, delivered through **GitLab CI**.

TATA Consultancy Services (TCS)

Dec 2021 – Aug 2025

Systems Engineer — Android Automotive (Jaguar Land Rover client)

- Built scalable UI components with Kotlin, Jetpack Compose, StateFlow, and ViewModels for Android Automotive ADAS features (Lane Keep Assist, Adaptive Cruise Control) using MVVM; performed functional testing on shipped ADAS modules using Gherkin.

Projects

Split Money – Full-Stack Expense Manager | [Web Demo](#) · [Android App](#) · [Source Code](#) Mar 2026 – Present

- Architected a **cross-platform application** (Web, Android) using **React Native**, migrating from a native Android MVP.
- Developed a scalable backend API with **Kotlin**, **Spring Boot**, and **Spring for GraphQL**, securing the application with **custom JWT authentication** via **Spring Security**.
- Integrated **PostgreSQL** (Neon DB) via **Spring Data JPA** and **Hibernate**; managed frontend state with **Zustand** and **Apollo Client**, and engineered a **greedy settlement algorithm** to net balances and minimize transactions. Deployed via **Vercel** and **Render**.

Expense Mate – Full-Stack Expense Tracker | [Demo](#) · [Source Code](#)

Nov 2024 – Apr 2025

- Built with **Next.js**, **TypeScript**, **MongoDB**, and **NextAuth**; implemented **Redis caching** to reduce MongoDB reads, improving API response time by **~40–50%**.

Achievements

- Innovation Super Star, TCS (Awarded for automation tools boosting productivity) – [Certificate](#) Dec 2024

Education

Rajarajeswari College Of Engineering, Bengaluru

Jul 2017 – Aug 2021

B.E. Electronics & Communication Engineering — **78.4%**
