Summary

Full Stack Developer skilled in Kotlin, Spring Boot, React, React Native, and cloud technologies; experienced in building scalable backend systems for banking applications and Android applications for automotive domains.

Skills

Languages: JavaScript, TypeScript, Kotlin, Python, SQL

Frameworks: Spring Boot, Next.js, React.js, React Native, Node.js, GraphQL

Tools & Concepts: gRPC, MVVM, REST APIs, Firestore, Redis, Git, Microservices

Cloud & DB: Firebase, Vercel, MongoDB Atlas, Google Cloud (GCP), PostgreSQL, MySQL

Experience

Accenture (Payroll: eSoftLabs)

Aug 2025 – Present

Full Stack Developer (Banking Sector – Varo Project)

- Developed and maintained backend **microservices** using **Kotlin**, **Spring Boot**, and **Docker** for the cashback squad, integrating vendor APIs and **Kafka** event streaming, plus a **React Native** feature carousel for the cashback screen.
- Implemented **gRPC** for inter-service communication, using an internal **Spring Security** plugin to extract customer context from RPC metadata, and **SQL** databases for financial data persistence.
- Engineered a cron-scheduled batch pipeline to backfill zip codes for **7.5M users**, using **Kotlin Coroutines** for controlled concurrency and a **circuit breaker** to fast-fail on vendor API failures.

TATA Consultancy Services (TCS)

Dec 2021 – Aug 2025

Android Developer (Jaguar Land Rover client)

- Performed functional testing on **Android Automotive ADAS** modules using **Gherkin**, while reviewing the Kotlin codebase to understand the MVVM architecture and data flow.
- Built scalable UI components with **Kotlin**, **Jetpack Compose**, **StateFlow**, and **ViewModels** for Android Automotive ADAS features such as Lane Keep Assist and Adaptive Cruise Control, using **MVVM** architecture.

Projects

Split Money – Full-Stack Expense Manager | [Web Demo](#) · [Android App](#) · [Source Code](#) Mar 2026 – Present

- Architected a **cross-platform application** (Web, Android, iOS) using **React Native**, migrating from a native Android MVP to a **full-stack architecture**.
- Developed a **scalable backend API** with **Kotlin**, **Spring Boot**, and **Spring for GraphQL**, securing the application with **custom JWT authentication** via **Spring Security**.
- Integrated **PostgreSQL** (Neon DB) and managed frontend state using **Zustand** and **Apollo Client**; engineered a **greedy settlement algorithm** to calculate net balances and minimize transactions, deploying via **Vercel** and **Render**.

Expense Mate – Full-Stack Expense Tracker | [Demo](#) · [Source Code](#)

Nov 2024 – Apr 2025

- Developed the app using **Next.js**, **TypeScript**, **MongoDB**, and **NextAuth**; added visualizations with **Recharts**.
- Implemented **Redis caching** to reduce MongoDB read operations, **optimize API** response time by approximately **~40–50%**.

Achievements

- Innovation Super Star, TCS (Awarded for automation tools boosting productivity) – [Certificate](#) Dec 2024
- Solved **200+** problems on LeetCode to strengthen **DSA** and coding proficiency – [LeetCode Profile](#)

Education

Rajarajeswari College Of Engineering

Bengaluru Karnataka

Bachelor Of Engineering

Jul 2017 – Aug 2021

- Graduated with **78.4%** in **Electronics & Communication Engineering**.
